

My favorite birthday lies many years in the future.

Only in America. Short people can become longshoremen.

How do you describe a shortstop who hits long balls?

Are long balls round?

Do molders cast ballots?

Do tall people have shortcomings?

Why do we need two ears? We can listen to only one thing at a time. One ear, placed on top of the head a couple of inches behind the center, would give us all of the hearing we need; and would provide side advantages. Examples: The proposed change would act as a deterrent to those who tend to talk behind one's back; would smuggle the one ear in hair and thus eliminate the need for ear muffs; and the ear-itching problem would be reduced by 50%.

Why should both of our eyes point in the same direction? Do we want things which are going on behind our backs to go unseen? Of course not! One eye in the middle of the forehead and one in the nape of the neck would make more sense. This would provide us with both foresight and hind sight; and would improve our chances of having perfect eye sight because hind sight is always 20-20.

Schuyler Colfax had two ears and both of his eyes pointed in the same direction.

The easter season is a good time to reflect on one's life. So, let me reflect on mine.

It is full of ifs. If I had done this. If I had done that.

It has not been without rough times.

It has not escaped injustice.

It has been replete with mistakes.

It has had its share of defeats.

But, it has turned out rather well.

It has blessed me with good health and reasonably good security.

It has given me a wife who loves me in spite of myself.

It has provided me with three beautiful daughters and three fine sons.

It has awarded me four precious grandchildren.

Whom do I thank for all this? I can not take credit for it.

SOMEONE had to be watching over me.

Arthur W. Grandpa
